

Satvik Jain — Product Owner | Customer Risk Rating (CRR) Modernization

Leadership Impact Case (PI 25.1 – PI 25.4)

Context

When I joined **American Express in July 2024**, the CRR Modernization program was still forming—there was **no Product Manager**, limited documentation, and multiple teams awaiting direction.

I stepped forward with a **bias for ownership and clarity**, taking on **dual responsibilities as acting Product Manager and Product Owner** for the first three PIs (25.1 – 25.3). During this time, I managed two scrum teams and 30 + cross-functional stakeholders across Business, Technology, Design and Program Delivery.

I personally defined the **user journeys and feature scope** for core CRR capabilities — **Sandbox Simulation, Asset Manager, Advanced Rule Configurations, Version Rollback, and Audit History** — setting the foundation for the entire modernization roadmap.

When **Pallavi Sharma joined in PI 25.3**, I continued to manage most of that PI while supporting her transition. Once she took charge, we established a strong partnership — Pallavi leading program-level strategy and I driving end-to-end delivery of CRR features and user stories with precision, customer focus and discipline.

Our north-star goal was clear:

Validate Customer Risk Scores through a full end-to-end simulation on the new POA platform.

By PI 25.4 we achieved it — successfully executing simulations using mock data in E1 and becoming integration-ready with DAM in E2, marking the **Phase 1 completion of CRR Modernization**.

Lead with Courage | Strategic Ownership and Resilience

As a **strategic, resilient and hands-on leader**, I guided two scrum teams through ambiguity and resource gaps, defining feature scope, prioritization, and delivery cadence in the absence of a Product Manager.

I **represented CRR in ART-level PI refinements and Product demos for three PIs**, ensuring alignment between Product vision and Technology execution. I also supported **VP Lisa Podvoiskis and the GCIP leadership team** during program-level prioritization sessions to balance CRR needs with priorities.

My ability to translate technical complexity into business clarity earned trust from **Charu, Heidi, Tahnee, Tejas** and the Program team. Together we maintained delivery rhythm across multiple workstreams and ensured no PI spillovers even during leadership transition.

When **re-baselining occurred (after Pallavi joined)**, I pivoted from managing solo delivery to collaborating closely with her and the Design team. I partnered with Mamta (Designer) to redefine UI journeys and scope under compressed timelines, restoring Technology's confidence and protecting release dates.

These experiences shaped my reputation as a **steady, accountable and strategically grounded leader** who can stabilize chaos and drive outcomes under pressure.

Deliver for Customers | Customer-Obsessed Design and Impact

As a **customer-obsessed and insight-driven Product Owner**, I spearheaded the **User Journey Initiative** for CRR. I personally conducted over 20 UX research and interview sessions with compliance analysts and risk managers to decode their pain points and workflows.

These insights directly shaped critical capabilities like **Advanced Rule Configurations, Sandbox Version Rollback, Asset Manager, and View-Only MCO Screens**, making the platform intuitive, governed and auditable.

My focus was simple: to build a system our users love and trust — and **not to rebuild Cadence 2.0**.

This customer-first lens anchored every decision and helped differentiate CRR as a forward-looking product experience rather than a legacy migration.

Win as a Team | Empowering People and Building Collaboration

A hallmark of my leadership is **empowerment through trust and empathy**.

During the first three PIs, I managed all stakeholder engagement alone — driving alignment across Tech and Business while balancing execution pressure. When the workload peaked and a few deliverables slipped, I faced the feedback head-on and committed to transforming the team culture from individual dependency to shared ownership. That learning has become part of our team's DNA today.

I mentored **Tahcin and Suprana**, who were transitioning from enhancement-based work to building a product from scratch. Through coaching and structured knowledge sharing, I helped them gain confidence in writing user stories, interfacing with Tech, and presenting in PI refinements and sprint demos. Within weeks, they were owning their modules independently — a testament to my **inclusive and development-oriented leadership style**.

I also led cross-functional knowledge sharing to strengthen AML-wide collaboration:

- **Led sessions for Bridger, Cadence BAU, and Reporting teams** to share CRR modernization approaches and product lessons.
- **Facilitated learning sessions with IM and Case Management teams** to bring their best practices into the CRR Tech team.

These efforts positioned CRR as a learning and knowledge-sharing hub within the AML ecosystem and strengthened our collective delivery standards.

Make it Great | Quality, Innovation and Continuous Improvement

I take pride in being a **quality-driven and innovation-oriented leader** who balances speed with rigor.

After completing my **SAFe 6.0 Agile certification**, I implemented structured PI readiness practices that improved predictability and enabled zero spill-overs across four consecutive PIs. I personally partnered with QA teams for end-to-end testing, surfacing critical defects early and elevating our release quality.

As an **innovation champion**, I led the AI-driven backlog-grooming prototype that ranked **#33 out of 400 + global teams in Amex GrowthHack 2025**, placing us in the top 10 %. I also championed **ChatGPT Enterprise adoption** to automate documentation, PRDs and PI objectives, saving hours each sprint and improving focus on problem-solving.

Following the re-baseline, I worked closely with **Mamta (Design)** to re-scope features and rebuild wireframes under tight timelines, restoring stakeholder confidence and delivering on commitments without compromising UX quality.

These actions reflect my commitment to **excellence, adaptability and innovation at scale**.

Leadership Summary

Across FY 2025, I evolved from a hands-on problem solver into a **strategic, empathetic and empowering leader** who balances delivery discipline with human understanding.

- **Strategic Impact:** Defined the foundational CRR roadmap and user journeys that enabled Amex to validate risk scores on the POA platform.
- **People Leadership:** Coached Product Owners to become confident, independent leaders, creating a culture of shared ownership and trust.
- **Cross-Functional Influence:** Strengthened collaboration across AML products through knowledge sharing and partnership with senior leaders.
- **Innovation & Quality:** Drove AI adoption and delivered zero-spillover PIs with an uncompromising focus on execution excellence.

I consistently demonstrated **Amex Leadership Behaviors** — leading with courage, delivering for customers, winning as a team and making it great — turning CRR into a high-performing, customer-focused and collaborative team ready for the next phase of modernization.

Final Synthesis — Satvik Jain | Product Owner, Customer Risk Rating (CRR) Modernization

FY25 Impact Summary

Transformed an unstructured CRR program into a stable, customer-centric, and high-performing product—through strategic ownership, design-led delivery, team empowerment, and innovation.

✓ **Memory hook:**

“Satvik built it alone, scaled it with others, and future-proofed it with innovation.”

Outcome: Achieved Phase 1 goal – validated customer risk scores via full end-to-end simulation on the new POA platform (E1 mock run ✓ / E2 integration ready).

1 Lead with Courage | Strategic Ownership & Resilience

Headline: *Built foundations and stabilized delivery in the absence of a PM.*

- **Took dual role (PM + PO)** for PIs 25.1–25.3; managed 2 scrum teams and 30 + stakeholders across Business, Tech & Design.
 - **Defined user journeys & feature scope** for core capabilities – Sandbox Simulation, Asset Manager, Advanced Rule Config, Version Rollback and Audit History – establishing the CRR roadmap.
 - **Represented CRR** in ART-level PI refinements and product demos; supported **Lisa Podvoiskis and GCIP leadership** on program-level prioritization to align platform & enterprise strategy.
 - **After Pallavi Sharma joined (25.3)**, collaborated to re-baseline scope and UI design with Mamta under tight timelines, restoring Tech confidence.
- ✓ **Impact:** Transformed uncertainty into predictable delivery with clear strategic alignment and zero spill-overs.

2 Deliver for Customers | Design-Led Execution & Insight

Headline: *Put customer insight at the heart of every feature.*

- **Led User Journey Initiative** – 20 + UX research sessions with risk managers and analysts worldwide to decode needs and pain points.
 - **Translated insights into designs** for Advanced Rule Configurations, Sandbox Rollback, Asset Manager and View-Only MCO screens.
 - **Advocated the principle:** “*Don’t build Cadence 2.0.*” Focused on modernizing experience and eliminating legacy friction.
✅ **Impact:** Delivered a customer-first, governed and auditable UX that is modern, intuitive and trusted by users.
-

3 Win as a Team | Empowerment & Collaboration

Headline: *Shifted from individual ownership to team empowerment and cross-program learning.*

- **Converted feedback into growth:** After handling all stakeholders solo for 3 PIs, pivoted from “doing it all” to building team capacity and shared ownership.
 - **Mentored Product Owners Tahcin & Suprana** (transitioning from enhancement roles) to lead stories and PI demos within weeks through coaching and supportive leadership.
 - **Drove AML-wide collaboration:** Led knowledge-sharing for **Bridger, Cadence BAU and Reporting teams**; facilitated learning sessions with **IM and Case Management** experts to import their best practices into CRR Tech.
✅ **Impact:** Built a confident, independent Product team and positioned CRR as a knowledge hub within the AML ecosystem.
-

4 Make it Great | Quality, Innovation & Continuous Improvement

Headline: *Embedded rigor and innovation into delivery DNA.*

- **Applied SAFe 6.0 Agile principles** to institutionalize PI readiness and planning rigor – achieving zero spill-overs across four consecutive PIs.
 - **Partnered with QA** for end-to-end testing and early defect identification, improving release stability and stakeholder trust.
 - **Championed AI and automation:** Led AI-driven backlog-grooming prototype (**#33 of 400 + teams globally, GrowthHack 2025**) and introduced ChatGPT Enterprise for documentation and planning efficiency.
✅ **Impact:** Increased velocity and quality while establishing an innovation-forward culture across Product & Tech.
-

Leadership Takeaways — “3-30 Rule” for Directors

3 seconds (Headline):

Satvik stabilized an unstructured program, built its foundation solo, and elevated CRR to enterprise readiness.

30 seconds (Summary):

- **Courage:** Acted as PM + PO, defining direction and roadmap.
- **Customer:** Designed user-centric capabilities, avoiding Cadence 2.0.

- **Team:** Mentored and empowered POs, fostering cross-program learning.
- **Excellence:** Delivered zero-spillover PIs and championed AI innovation.

3 minutes (Deep Dive):

Use each leadership pillar above as a slide for storytelling — Courage → Customer → Team → Excellence.
