

Local Connectivity to Cloud Sql using Dynamic Keys

To connect to cloud sql locally with dynamic keys, below is required:

1. Api to get dynamic service keys for your service
2. Script in your service

Please run this script to connect your local connectivity to cloud sql

```
./scripts/start-cloud-sql-proxy-api.sh \
\
<PROJECT-ID> \
<REGION> \
<INSTANCE-ID> \
<E1 BASE URL with BASE ENDPOINT>/service-key \
<OUTPUT LOCATION FOR SERVICE-ACCOUNT KEY>
```

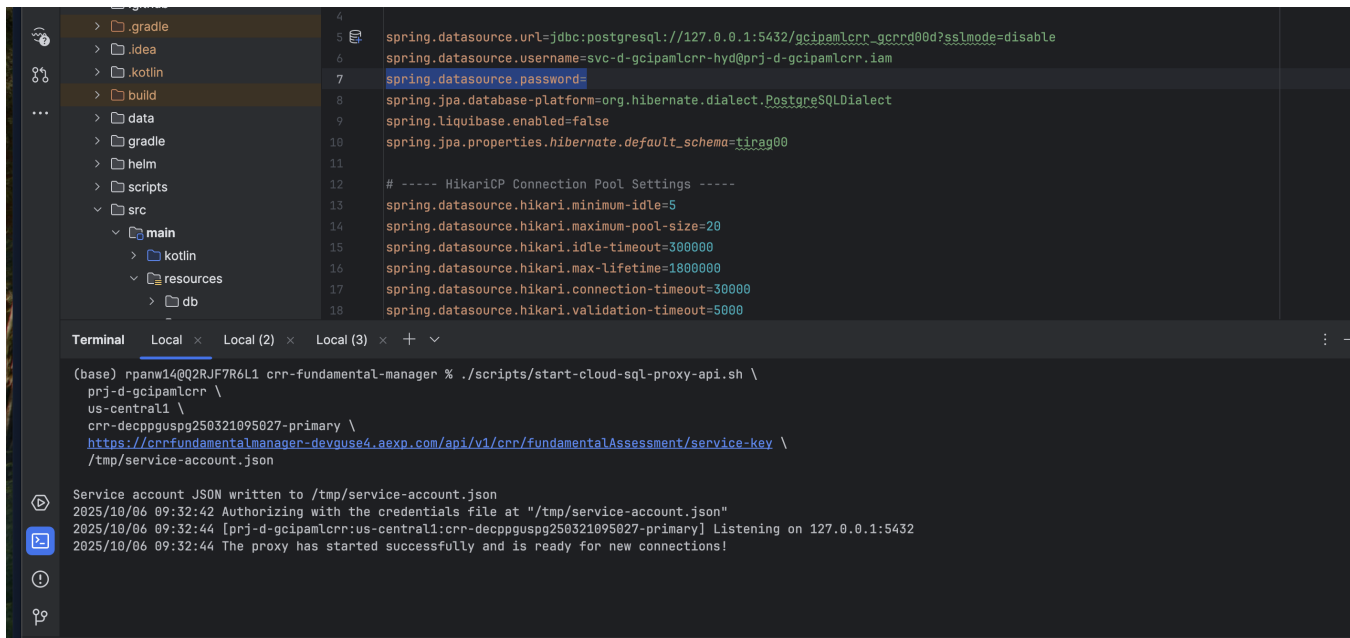

Example:

```
/scripts/start-cloud-sql-proxy-api.sh \
prj-d-gcipamlcrr \
us-central1 \
crr-decpgguspg250321095027-primary \
https://crrfundamentalmanager-devguse4.aexp.com/api/v1/crr/fundamentalAssessment/service-key \
/tmp/service-account.json
```

This script will do :

1. Installation of cloud-proxy-sql
2. Fetching Dynamic Service Key
3. Decoding of Service Key
4. Running cloud-proxy with Service Key

Once you see this, it means your local application is ready to connect with E1

```
spring.datasource.url=jdbc:postgresql://127.0.0.1:5432/gcipamlcrr_gcrrd00d?sslmode=disable
spring.datasource.username=svc-d-gcipamlcrr-hyd@prj-d-gcipamlcrr.iam
spring.datasource.password=
spring.jpa.database-platform=org.hibernate.dialect.PostgreSQLDialect
spring.liquibase.enabled=false
spring.jpa.properties.hibernate.default_schema=tirag00

# ----- HikariCP Connection Pool Settings -----
spring.datasource.hikari.minimum-idle=5
spring.datasource.hikari.maximum-pool-size=20
spring.datasource.hikari.idle-timeout=300000
spring.datasource.hikari.max-lifetime=1800000
spring.datasource.hikari.connection-timeout=30000
spring.datasource.hikari.validation-timeout=5000
```

```
(base) rpanw14@Q2RJF7R6L1 crr-fundamental-manager % ./scripts/start-cloud-sql-proxy-api.sh \
prj-d-gcipamlcrr \
us-central1 \
crr-decpgguspg250321095027-primary \
https://crrfundamentalmanager-devguse4.aexp.com/api/v1/crr/fundamentalAssessment/service-key \
/tmp/service-account.json

Service account JSON written to /tmp/service-account.json
2025/10/06 09:32:42 Authorizing with the credentials file at "/tmp/service-account.json"
2025/10/06 09:32:44 [prj-d-gcipamlcrr:us-central1:crr-decpgguspg250321095027-primary] Listening on 127.0.0.1:5432
2025/10/06 09:32:44 The proxy has started successfully and is ready for new connections!
```

Make below changes to your application-e0.properties file

```
spring.datasource.url=jdbc:postgresql://127.0.0.1:5432/gcipamlcrr_gcrrd00d?sslmode=disable
```

And, you are ready to connect.
