

Phase 1

Work Items
Lumi Onboarding
Connection Setup for importing data from existing DBs
Migrate CRR Daily & Sandbox Process to BigQuery (Lumi)
Reporting & Stats Generation (TBD)
Discovery & POC for New CRR UI
Finalization of Wireframes
Database Design for UI Backend
GIT & CI/CD Strategy

Issue & Roadblocks
Only way to ingest data to Lumi from OnPrem systems is via Lumi First approach, which is a tedious and time taking process as lot of tables would have to be ingested. This work also would be throwaway, as in POA system we would be taking the data from DAM directly.
Sending the data back to Db2 & Oracle also might be a challenge. (This is required to keep Review Scheduling & UI BAU)

Questions
Expanding the data at MF end and then sending via SFTP
Send the expanded data only for impacted accounts and customers
Can we directly source the data from Lumi instead of depending on MF/Oracle
Making changes in CRR to stop using surrogate keys like PTY_KEY_ID
Can oracle be migrated to GCP (Cloud SQL)
Should we store the attribute related to the elemental scoring, that drives the rating
