

Proposed Ratio Rules

Update February 13, 2025

In the Sprint Refinement call with Tommy we have discussed regarding Ratio Rule and aligned that Ratio rules need not to be made dynamic as they are very specific and in the future also there is no use case to add other DataPoints with it.

Data Point to Attribute LookUp Table

DataPoint Id	Corresponding Attribute Column	Identifier
67	TOT_TRANS_CT	Ratio
46	CPLI_PROD_TYPE_CD	Max
64	TRANS_TYPE_CD	Max
29	TRANS_AGE	Max

Grouping Metadata Table for Ratio Rules

DataPoint Id	Grouping Info
67	{SecGrp1:[64,46,29],SecGrp2:[65,29],PrimaryGrp: 67}
68	{SecGrp1:[64,46,29],SecGrp2:[65,29],PrimaryGrp: 68}

Income Ratio

Default Scoring for specific Datapoint Id's 13 and 55 not passing the Rule(Need to Confirm if Default scoring is needed or not)

Aggregation is happening at 2 levels first Max and then Sum(can we merge them ?)

Filter to ensure both the TOT_TRANS_AM and INCOM_AM columns are greater than 0 before taking Ratio
