

Authentication Integration in Service

Please follow below steps to integrate Authentication:

1. First register your backend service as a provider in idaas, click on Add New <https://idaas.aexp.com/idaas/>

Create a new integration request for the Application Id: 600003728

* Integration Alias:

* Integration Type:

☐ Consumer

☒ Provider

* Install Domain:

☐ Internet

☒ Intranet

* Deployment Mode:

☒ Filter

☐ Valve

☐ APFCEE

☐ One Data

☐ Enterprise Service Mesh

* Project Description:

Note: To Proceed with the next steps, the request has to be approved by the Application Director. Email notification will be sent to the Director with the Approval link. Clicking on the link will open the Approval Page and Director can click on Approve. Request will also be pushed to Amex-Actions for Director Approval. On Approval, Integration(Client) Id and Secrets are created for the application and shared in an encrypted email.

See our [Confluence Onboarding Guide](#) or [Help page](#) for more information.

Fields marked * are mandatory

Submit

Close

2. Once it is approved by your leader, click on edit and add required details as in screenshots

Application ID:

60003728

Integration Type:

S50 Resource Protection

Install Domain:

IntraNet

Change Version:

1

Requester Name:

Ranjana Panwar

Date Created:

Sep 17 2025 21:09:58 MST

Next

7. Save and Submit for E1, and once, policies have been configured mail received, submit E2 will enable, and can submit for E2, same for E3

8. Once, provider setup is done, consumer needs to be added. Click on Add New and fill below details

Create a new integration request for the Application Id: 600003728

* Integration Alias:

CRR-UI

* Integration Type:

☒ Consumer
☐ Provider

* Project Description:

Consume APIs

Note: To Proceed with the next steps, the request has to be approved by the Application Director. Email notification will be sent to the Director with the Approval link. Clicking on the link will open the Approval Page and Director can click on Approve. Request will also be pushed to Amex-Actions for Director Approval. On Approval, Integration(Client) Id and Secrets are created for the application and shared in an encrypted email.

See our Confluence Onboarding Guide or Help page for more information.

9. Add below details for consumer

General

Resource Access

Audit Logs

Delete

Integration Alias: Customer-Risk-Rating-UI

Application ID: 600003728

Application Name: AML Customer Risk Rating

Integration Type: Application to Application Access

Integration ID: fcd577fa-3d34-3770-b3ee-3cd03153a7c

Install Domain: IntrAcet

Security Classification: AXP Restricted

Change Version: 1

Policy Schema Version: 1

Requestor Name: Ranjana Panwar

SSO Contact: #identity-authz-support

Date Created: May 15 2025 22:28:43 MST

Retrieve Secret Keys: Get Secret

Project Description:

CRR frontend to configure rules for risk scoring.

Authorized Users (Enter Email Ids: (Max upto 5 Email Ids) (Optional))

Enter Here + Update

Authorized User	Action
Ranjana.Panwar@acxp.com	

10. Search for Application ID, for which resources needs to be consumed, and select applicable url and methods

General

Resource Access

Audit Logs

Delete

Integration Alias: Customer-Risk-Rating-UI

List of all protected resources for CustomerRiskScoring

Protected Resource	HTTP Methods / Current Status
/api/v1/cm/**	GET - Approved PUT - Approved POST - Approved DELETE - Approved PATCH - Approved

Request Description (Optional)

This message will be seen by the provider before they approve/reject this request

Close Submit Request

11. Now, once request is submitted by provider, search for your application id, and go to the provider and edit it, then go to pending requests and approve applicable one.

General

Policies

12. Once provider and consumer are configured in IDAAS, add identity side car container in your service. Go to your values.yml file and make below changes

```
identityAuthorization
:
  enabled: true
  appHealthCheck:
    /health
```

```
1 configMap:
2   EPAAS_ENV: e2
3   proxy-host: PHXAPPGWE2-VIP.phx.aexp.com
4   proxy-port: 9090
5   GOOGLE_APPLICATION_CREDENTIALS: /tmp/key.json
6 identityAuthorization:
7   enabled: true
8   appHealthCheck: /health
9 deployment:
10   gcpServiceAccountEmail: svc-t-crr-services-hydra-sa@prj-t-gcipamlcrr.iam.gserviceaccount.com
11   lifecycle: {}
12   livenessProbe: {}
13   readinessProbe:
14     failureThreshold: 3
15     httpGet:
16       path: /health
17       port: 8080
18       scheme: HTTP
19     initialDelaySeconds: 30
20     periodSeconds: 10
21     successThreshold: 1
22     timeoutSeconds: 15
23   resourcesLimitsCPU: '1'
24   resourcesLimitsMemory: 4G
25   resourcesRequestsCPU: 250m
26   resourcesRequestsMemory: 1.5G
27 hpa:
```

13. Add client-id and client-secret in vault, once received from clicking on secret in general tab.

14. After deployment, onedentity-authz container will get visible
