

DAM - CRR Integration

S N o.	Scenario	DAM Change Log	DAM Extraction Logic	CRR Scoring Methodology	Comments
1	Addition of New Relationship to an existing customer	record added	- Identify all relationship for a customer from Application & Maintenance - Fetch the Attributes from Maintenance against each relationship if present otherwise fetch from Application ODL - Fetch Acquisition Channel always from Application ODL	Rescore all the relationships of the customer for all the attributes	How to handle the scenario when the data for an existing customer relationship is not available in Maintenance ODL?
2	Relationship closed for an existing customer	record deleted	- Identify all relationship for a customer from Application & Maintenance - Fetch the Attributes from Maintenance against each relationship if present otherwise fetch from Application ODL - Fetch Acquisition Channel always from Application ODL	Rescore all the relationships of the customer for all the attributes (No need to do Account Scoring for the closed relationship) End Date the Account Score output for that relationship?	
3	Addition of new Customer	record added	- Identify all relationship for a customer from Application & Maintenance - Fetch the Attributes from Maintenance against each relationship if present otherwise fetch from Application ODL - Fetch Acquisition Channel always from Application ODL	Rescore all the relationships of the customer for all the attributes	
4	Closing an entire Customer and all its relationships	record deleted	- Identify all relationship for a customer from Application & Maintenance - Fetch the Attributes from Maintenance against each relationship if present otherwise fetch from Application ODL - Fetch Acquisition Channel always from Application ODL	End Date the CRR score rows?	
5	Record Delete - If the record was earlier available in SOR, but in the next run it is not available			Should be similar to Scenario #2 or #4	
6	CRR Attribute Change for an existing relationship	block changed eg: first_nm , ad_home_city	- Identify if there is a valid CRR attribute change, then - Identify all relationship for a customer from Application & Maintenance - Fetch the Attributes from Maintenance against each relationship if present otherwise fetch from Application ODL - Fetch Acquisition Channel always from Application ODL	Rescore all the relationships of the customer only for the changed attributes	
7	Relationship reinstated (Status from Suspended /Cancelled to Active)	acct_sta		Same as #1	
8	1/7 + 2	record added /acct_sta		Rescore all the relationships of the customer for all the attributes End Date the Account Score output for that relationship?	

9	1/7 + 5	record added /acct_sta		Rescore all the relationships of the customer for all the attributes End Date the Account/Cust Score output depending upon the record_delete scenario?	
10	1/7 + 6	record added /acct_sta + block changed		Rescore all the relationships of the customer for all the attributes	
11	2 + 6	record deleted / block changed		Rescore all the relationships of the customer for all the attributes End Date the Account Score output for that relationship?	
12	5 + 6				

CRR Triggered Processes
