

Inventory Manager

Component Name	Inventory Manager
Vision /Mission	The inventory manager component is a rules engine that is responsible for matching user skills with available cases to work. It will take into consideration time away schedules, resource availability, resource skills, access rights. This will use Enterprise frameworks and existing components to reduce the amount of new development required.
Capabilities	• UI for management of resource metadata, skills (i.e. add/remove/modify new investigator skills), time away (working/non-working time) schedules (i.e. add/remove/approve PTO & sick time), access level controls (i.e. adding/onboarding new investigator) • UI for case metadata: SLA's, priority, skills required, org/market • Integration with IIQ • Business rules configuration UI • Moving and assigning cases (individual/bulk)
Technology	Backend storage/DB: API's: Hosting platform: eCP / OneAmex? / OneData? / OneStream? Messaging: Reliable Transaction Framework (RTF) / Kafka Rules Engine:
Inputs	Inflows of cases from Columbus Migration Orchestrator Inventory Manager MVP1 Inputs (Canada market): • 12714 - Large Spend at Sensitive Merchants - Low Risk Jurisdiction • 12715 - Large Spend at Sensitive Merchants - High Risk Jurisdiction • 12701 - Round amount at sensitive merchant
Outputs	Cases flow to Case Manager either manually or automatically
Entity	• FIU Investigators • Cases • Skills • PTO Schedules • Markets / Teams / Roles • SLAs / Timelines
