| Component Name            | Migration Orchestration                                                                                                                                                                                                                                                                                                                                                             |
| Vision /Mission           | The migration orchestration component is responsible for determining whether a case is opened in legacy GAITS or in the SLPM platform. This is a rules engine that makes decisions based on incoming data on where to route the case. This is a transient component that will no longer be utilized after the SLPM platform is fully live and no cases are routed to legacy GAITS.  |
| Capabilities              | <ul style="list-style-type: none"><li>• Inspect incoming alerts to determine if they are in scope for SLPM<ul style="list-style-type: none"><li>◦ Have thresholds for opening cases in SLPM already been achieved?</li></ul></li><li>• UI for rules authoring and modification</li><li>• RBAC for rules and administration</li><li>• Routes cases to legacy GAITS or SLPM</li></ul> |
| Technology                | Backend storage/DB:<br><br>API's:<br><br>Hosting platform: eCP / OneAmex? / OneData? / OneStream?<br><br>Messaging: <a href="#">Reliable Transaction Framework (RTF)</a> / Kafka<br><br>Rules Engine:                                                                                                                                                                               |
| Inputs                    | Alert data and supporting information<br><br>MVP1 Inputs (Canada market): <ul style="list-style-type: none"><li>• 12714 - Large Spend at Sensitive Merchants - Low Risk Jurisdiction</li><li>• 12715 - Large Spend at Sensitive Merchants - High Risk Jurisdiction</li><li>• 12701 - Round amount at sensitive merchant</li></ul>                                                   |
| Outputs                   | Information/cases are sent to GAITS or Inventory Manager depending on the correct inputs and data                                                                                                                                                                                                                                                                                   |
| Entity                    | <ul style="list-style-type: none"><li>• SLPM administrators</li><li>• Rule authors</li></ul>                                                                                                                                                                                                                                                                                        |
